A vehicle frame, also known as its chassis, is the main supporting structure of a motor vehicle to which all other components are attached, comparable to the skeleton of an organism. Until the 1930s, virtually every car had a structural frame separate from its body. This construction design is known as body-on-frame. Over time, nearly all passenger cars have migrated to unibody construction, meaning their chassis and bodywork have been integrated into one another. Nearly all trucks, buses, and m

The differences in parameters between motorcycle driving behavior in the city of Tehran and standard ECE driving cycles is obvious in Table 1. Larger relative positive acceleration in Tehran is an indication of more energy consumption and more dynamic driving behavior (Boulter, 2007, Weijer, 1997). As such, it was expected that, emission factors for motorcycles obtained from chassis dynamometer ...
