Disease Management A Systems Approach

Understanding the course of the disease to which the disease management programme or system is focused. The difference between a programme and a system is that the first one is more loosely organised than the last one. The title of this book contains the words Systems Approach, which emphasises the authors' preferences for systems. Most disease management systems are focused on diseases as Asthma/COPD, diabetes, depression, cardiovascular disease and cancer.

Disease Management Accreditation had two evaluation options for different program orientations (patient and practitioner oriented and patient oriented). Population Health Program Accreditation has fewer requirements than disease management accreditation. Some requirements are new; many are similar to those in disease management accreditation.

Disease Management - NCQA

Disease management is one approach that aims to provide better care while reducing the costs of caring for the chronically ill. Disease management programs are designed to improve the health of persons with specific chronic conditions and to reduce health care service use and costs associated with avoidable complications, such as emergency room visits and hospitalizations.(2)

Disease Management Programs: Improving health while ...

Disease management is defined as "a system of coordinated healthcare interventions and communications for populations with conditions in which patient self-care efforts are significant." For people who can access health care practitioners or peer support it is the process whereby persons with long-term conditions share knowledge, responsibility and care plans with healthcare practitioners and/or peers. To be effective it requires whole system implementation with community social support networks

Disease management (health) - Wikipedia
