An embedded system is a computer system that is part of a larger system or machine. It is a system with a dedicated function within a larger e Top 18 Embedded Systems Interview Questions & Answers

Top 18 Embedded Systems Interview Questions & Answers
When access specifiers are used in printf function, the compiler internally uses those specifiers to access the arguments in the argument stack. In ideal scenario compiler determines the variable offset based on the format specifiers provided. If we write printf("%d", x) then compiler first accesses the first specifier which is %d and depending on the that the offset of variable x in the ...

C Interview Questions and Answers for Experienced
Embedded C Interview Questions ; Question 24. What Is A 'volatile' Variable? Answer : Volatile is a keyword to specify the compiler that this variable value can change any time, so compiler should always read its value from its address, and not to use temporary registers to store its value and use in later part of the code.
