How the Immune System Works (The How it Works Series ...

Your immune system protects your body from infectious germs. Through highly complex and adaptive processes, a healthy immune system is always at work, protecting you from infections by identifying and destroying harmful microorganisms. Your immune system also helps you build immunity so that when you encounter certain invading germs again, you can fight them faster the next time around, often without even getting sick at all.

How the Immune System Works - Verywell Health

Your immune system responds and eliminates the invaders while the skin heals itself and seals the puncture. In rare cases the immune system misses something and the cut gets infected. It gets inflamed and will often fill with pus. Inflammation and pus are both side-effects of the immune system doing its job.
