Functions are one of the fundamental building blocks in JavaScript. A function is a JavaScript procedure—a set of statements that performs a task or calculates a value. To use a function, you must define it somewhere in the scope from which you wish to call it.

Functions - JavaScript | MDN

Java has grown to become one of the most popular programming languages in the world. It is versatile, relatively easy to use, and has a wide range of use cases. This makes it a great language to learn - for beginner and experienced programmers alike - and has resulted in a large number of people asking how to code in Java.

How to Code in Java: The Complete Java for Beginners Guide

Java is – Object Oriented – In Java, everything is an Object. Java can be easily extended since it is based on the Object model. Platform Independent – Unlike many other programming languages including C and C + +, when Java is compiled, it is not compiled into platform specific machine, rather into platform independent byte code.
