Mount these valves directly to cylinder ports, eliminating additional tubing between the cylinder and valve for better control than inline valves. Made of plastic and stainless steel parts, they have excellent corrosion resistance. They control the speed of air-powered equipment by adjusting the volume of airflow.

HAYWARD FLOW CONTROL COVID-19 UPDATE. With the latest United States Government information regarding Covid-19, Hayward Flow Control is closely monitoring the situation and taking all appropriate actions to insure the safety and welfare of our team and customers.

## **Welcome to Flow Control**

In plastic piping systems, Hayward defines a generally accepted safe flow velocity as no more than 8 feet per second for piping systems that do not have fast opening or closing valves. For systems that do have these types of valves (such as solenoid valves or pneumatically actuated valves without speed controls) the maximum velocity is usually 5 feet per second.

## **Flow Velocity in Plastic Piping Systems | Flow Control**

As the name implies, the function of the valve is carried out by electric current. Solenoid valves are widely used in industry, agriculture, and even household applications, and in some cases, such as interrupting and connecting the flow, combining two flows, with appliances such as automatic water pump and so on.
