ROBERT J. MARZANO

The selection of appropriate outcomes is crucial when designing clinical trials in order to compare the effects of different interventions directly. For the findings to influence policy and practice, the outcomes need to be relevant and important to key stakeholders including patients and the public, health care professionals and others making decisions about health care.

1.2.1 Making Data Usable for Analysis. Many data providers collect data in outmoded files and disconnected databases. The data are often not in formats amenable to systematic data analysis, and data providers interested in research with administrative data would have to commit resources to overhauling their systems and collecting or digitizing key outcomes of interest.
